

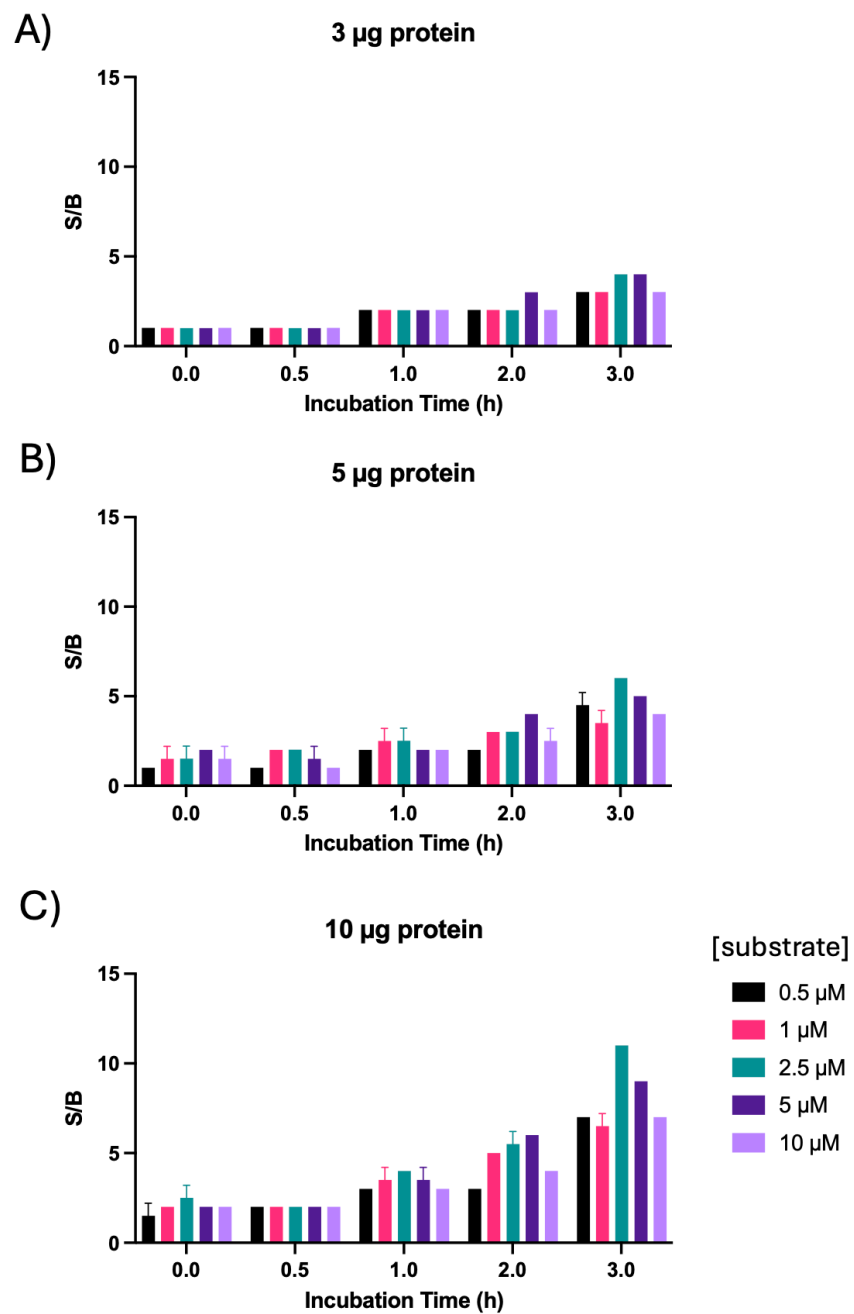

Figure S4. A comparison of S/B ratios among 3, 5, and 10 µg protein exposed to a range of Rbm14-12 substrate concentrations and substrate incubation periods. (A) S/B ratios for 3 µg protein ($n = 2$). (B) S/B ratios for 5 µg protein ($n = 2$). (C) S/B ratios for 10 µg protein ($n = 2$). Error bars indicate standard deviation.
